The Aylamazyan University of Pereslavl

Professor Alfred Aylamazyan, Founder and First Rector of the University of Pereslavl, Pereslavl Honorary Freeman, Doctor of Science

From the address delivered by Alfred Aylamazyan in the press conference devoted to the tenth anniversary of the University of Pereslavl.

When the University got its start 10 years ago, different people had different perspectives about its future trends: from extremely negative to reasonably optimistic. Life has proved the viability and necessity of our decision. Any unnecessary task will inevitably fizzle out, but the University is still alive and kicking.

The Program System Institute first expressed the idea of creating a university in Pereslavl in 1986. Back then, the Institute was submitting a proposal to the Central Committee of the CPSU with the intension of creating a scientific town out of Pereslavl. In 1986 in our report to the Central Committee, we suggested that the creation of a higher education institution would be crucial and vital for both the Institute and the enterprises of the town as it could be a perfect source of specialists. Time was creeping on, and the idea was still there. We did our best to see this idea fulfilled.

I cannot pass by the person who initiated the creation of the University, supported us, and actively assisted all our initiatives. I am speaking of Eugene Velikhov; back then, he was vice-president of the Academy of Sciences. The idea was also supported by the directors of Pereslavl enterprises (LIT, Slavich, Red Echo), Pereslavl and Yaroslavl administrations.

The University is our excellent child who grows and develops, but we are to accelerate the pace.

Alfred Aylamazyan

Professor, First Rector
of the University of Pereslavl

Our Founders

- The Program Systems Institute of RAS
- The Russian Research Institute for Regional Problems
- The Administration of Pereslavl-Zalessky
- Pereslavl-Zalessky municipal officials
- The Slavich Corporation
- The LIT Factory, Inc.
- Zalessye, Inc.
- Pereslavlstroy, Inc.
- New World, Inc.

The Trustee Council

Infrastructure

The Aylamazyan University of Pereslavl

It is clear now that the University proved useful and will successfully go on developing owing to the resources of PSI RAS; specifically, the teaching activities of scientists and post-graduates. The University will continue the progressive motion given by its founder Alfred Aylamazyan.

The major direction of education is information technologies. They are what we need to master if we are pretending to be responsive to the demands of the times. Our future is what the technological advance demands. If we conceit ourselves to be feeble and miserable, if we do not raise our children with the requirement of a new life in mind, we won't progress.

Our University is an embodiment of the concept of reclaiming close tights between academic science and education. We have numerous examples of students' participation in scientific activities of the Institute. Since PSI RAS is a leading research institute in Russia, our students are involved in the most outstanding scientific research projects of the present. Every student can have such an opportunity. Whether they take advantage of this opportunity or not is up to them. The level of competence, knowledge, and skills of the students satisfies contemporary educational standards; however, whether the alumnus is a second-rate or high-qualified specialist depends on his assiduity during the studies.

Sergei Abramov

Rector of the University of Pereslavl,
Doctor of Science

Teaching at the University

The main source of teaching staff is based at the Program Systems Institute of the Russian Academy of Sciences (PSI RAS). The teaching staff includes leading scientists of PSI RAS, Computer Center RAS, Moscow State University who are highly qualified specialists in network technologies, artificial intelligence, system analysis, and mathematical modeling. The University invites leading Russian scientists to deliver lectures: academicians Eugene Velikhov, Vladimir Illin, Vladimir Voevodin, and others.

Aiming at training high qualified programmers, the University gives special attention to network programming (UNIX, ORACLE, Microsoft).

Syllabus

- Programming Languages and Technologies
- Internet Programming
- Electronic Commerce
- Information Security
- Computer Graphics and Design
- Knowledge Engineering and Intelligent Systems
- Control Theory, and others

University Alumni

University alumni are employed in Pereslavl (The Aylamazyan University of Pereslavl, Program Systems Institute of RAS, the LIT factory, the Slavich company, the Kodak branch, the NewWorld embroidery factory, the Strategy firm, The Aylamazyan International Children's Computer Center of PSI of RAS Yaroslavl, Moscow, and abroad.

Specialties

010200 Applied Mathematics and Computer Science
351400 Computer Science (in Economics)
071900 Information Systems and Technologies
Students at the University can expect to complete their undergraduate work in 5 years.
Lecturers

Professor Gennady S. Osipov, Doctor of Science, President of the Russian Association of Artificial Intelligence, delivers lectures in knowledge engineering and intelligent systems.

Professor Elena V. Ryumina, Doctor of Science, leading researcher at the Market Economy Institute, delivers lectures in economics and economics of environment.

Professor Sergei V. Znamensky, Doctor of Science, Head of the Informatization of Education and Publishing Systems Laboratory of PSI of RAS, delivers lectures in mathematical analysis and functional analysis.

Professor Vyacheslav M. Khachumov, Doctor of Science, delivers lectures in information security and computer graphics.

Professor Vladimir I. Gurman, Doctor of Science, President of the University Education Support Foundation, Head of the Control Processes Research Center of PSI of RAS, delivers lectures in control theory and system analysis.

Eugene P. Kurshev, Ph.D., associate professor, senior researcher of the Artificial Intelligence Research Center of PSI of RAS, delivers lectures in databases.

Lyudmila B. Sukina, Ph.D., Head of the Department of Humanities and Foreign Languages, delivers lectures in culturology and computer design.

Professor Anatoly M. Tsyrlin, Doctor of Science, Head of the System Analysis Research Center of PSI RAS, delivers lectures in optimization theory.

Eugene P. Lilitko, CTO of the Strategy firm, delivers lectures in Internet programming and electronic commerce.

✓ Students who specialize in **Applied Mathematics and Computer Science** are trained as programmers who work with computer networks. Graduates may become system administrators, web masters, and programmers of large-scale information networks.

✓ **The Information Systems and Technologies** department trains specialists in computer hardware. By graduation, our students can assemble and repair individual computers, connect computers into networks, and link local area networks to the World Wide Web — skills that are currently in great demand.

✓ The goal of the **Computer Science in Economics** department is to teach computer technologies in economics is. The program provides undergraduates with an opportunity to combine new technologies with the traditional subject areas of Economics, ranging from accounting and marketing to economic analysis, modeling, and forecasting.
